2.1. Price of oil. A factor which may affect both the demand and the supply of gas is the price of oil. The price of oil is relevant because of substitution properties of gas and oil (Villar and Joutz, 2006).

Compressible flow (gas dynamics) is the branch of fluid mechanics that deals with flows having significant changes in fluid density. Gases, mostly, display such behaviour. While all flows are compressible, flows are usually treated as being incompressible when the Mach number (the ratio of the speed of the flow to the speed of sound) is less ...

The original and most important application of CO methanation is the removal of carbon monoxide from syngases, e.g. in ammonia production processes and later upstream proton-exchange membrane fuel cells . CO methanation gained importance for the production of SNG during the oil crisis in the late 1970s.
